Professional Experience

Front-end Web Developer

October 2022 - October 2024

Konbini — Online Media — Paris, France

- **Technologies used** : JavaScript, TypeScript, React, Next.js, Tailwind, GraphQL, WordPress
- Redesigned the homepage of the [Konbini](#) website to maximize attractiveness and user engagement.
- Integrated advertising banners in collaboration with external partners, contributing to increased advertising revenue.
- Automated the integration of podcasts via content semantic analysis.
- Developed a dynamic YouTube embed component optimized for smooth rendering.
- Integrated a dynamic Twitch block on the homepage with real-time live detection using the Twitch API.
- Managed multi-author display for articles with dynamic content retrieval.
- Improved on-page SEO through HTML tag adjustments, leading to better search engine rankings.

Web Developer

April 2021 - August 2022

French Innov — Digital Solutions Company — Stains, France

- **Technologies used** : JavaScript, React, Bootstrap
- Designed and developed custom showcase websites for restaurant owners, highlighting their visual identity, menus, and special offers.
- Implemented interactive features on self-service kiosks, ensuring a smooth and intuitive user experience, contributing to improved operational efficiency.

Education

Bachelor's Degree in Web and Mobile Design and Development
HETIC — Montreuil, France

September 2022 - September 2024

Diploma of advanced technology in software development
Institut F2I — Vincennes, France

September 2020 - September 2022

Minor in Arts & Sciences, Computer Sciences
University of Montreal — Montreal, Canada

September 2018 - January 2019

High School Diploma in Management and Information Systems
Lycée René Descartes — Champs-sur-Marne, France

September 2017 - July 2018

Personal Projects

Bumble B - Mobile app for controlling a remote-controlled car — September 2024

- Link : [Bumble-B](#)

Developed as part of my final year project, Bumble B is a mobile application that allows users to control a small car equipped with an ESP32 module. The app manages parameters such as speed, trajectory, and data collection.

Bitjustu - AI-powered image editing app — November 2023

- Link : [bijutsu.app](#)

Bitjustu is a project I designed to practice using authentication tokens in a front-end application. The app allows users to modify images through text-based commands using the [Replicate](#) API to transform these instructions into visual modifications.

EcoMap - Interactive map — July 2023

- Link : [figma.com/ecomap](#)

EcoMap is a mockup of an application designed on Figma for my first-year final project. The app raises awareness and informs users about environmental events in their region using an interactive map. This project enhanced my UX/UI design skills and project management abilities.

Calculator - Application developed with React — October 2022

- Link : [calculatrice-react.app](#)

This project involved developing a calculator using React to explore the fundamentals of the framework while testing the skills I acquired through self-learning. It was an excellent entry point to immerse myself in the React ecosystem and solidify my web development foundations. This project also helped me develop a more efficient self-learning methodology.

Interests

- **Judo** : A discipline that taught me perseverance, rigor, and respect.
- **Cooking** : A field that broadened my understanding of gastronomic traditions.
- **Reading** : A way to develop my critical thinking.
- **Fashion** : Expression of my creativity and attention to detail, while staying up to date with trends.
